intro: Pocket-Sized Spray Paint

hey internet, remember the [Pocket Graffiti Pen](#) ?, instead of fainting while trying to tag something, try it with compressed air!

(I am using the same idea as [PocketSized](#) so he deserves most of the credit :)

step 1: Supplies

You need:

- a pen with a fiber tip
- a pen tube with a hole in it
- compressed air/gas duster

The 10oz duster is a little big to fit in a pocket, but I have seen little air dusters at staples that would fit perfectly into a pocket.

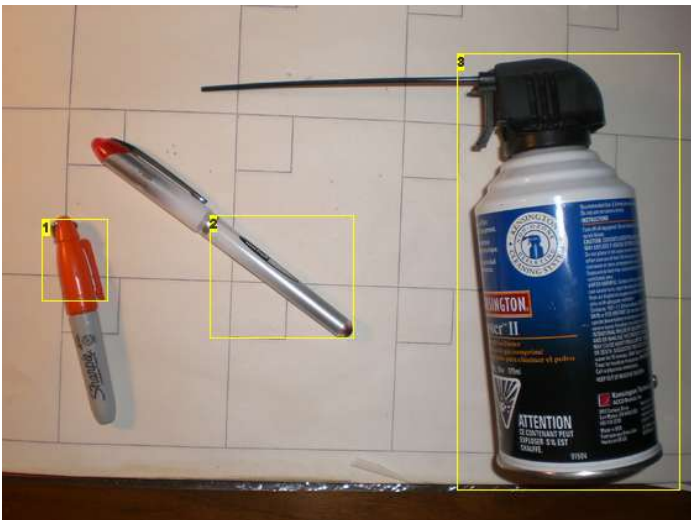

Image Notes

1. ink
2. ink blower
3. compressed air/gas duster

step 2: Assembly

Well its pretty much the same idea, remove the marker nib, and insert it into the ink blower. Next take your air supply, compressed gas duster, and remove the straw thinger.

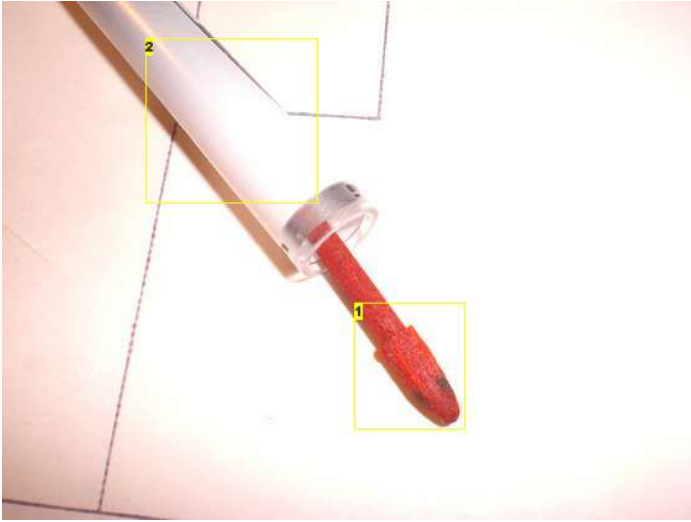

Image Notes

1. ink
2. ink blower

Image Notes

1. used to be a straw like thing here...

step 3: Final Assembly

Connect the ink blower to the nozzle on the gas duster, make it as airtight as possible. An idea on how to make the seal between the nozzle and the ink blower airtight, put sticky tack around the nozzle on the gas compressor and shove it into the ink blower.

Image Notes

1. make sure the connection is as air-tight as possible

Image Notes

1. the business end

step 4: Let 'er rip

thank you for your time.

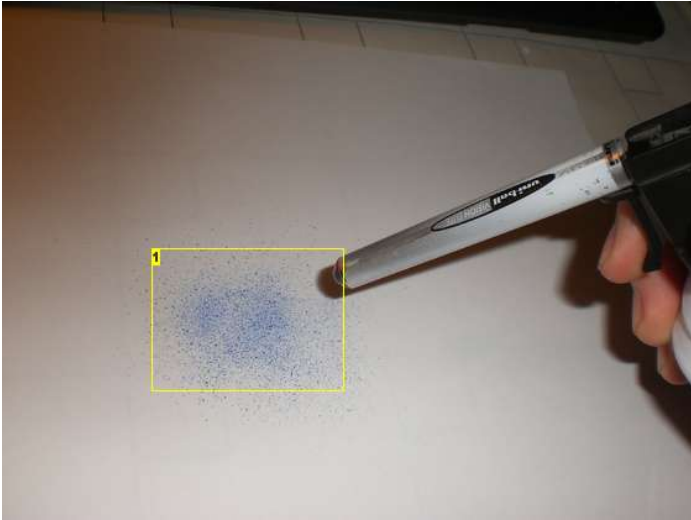

Image Notes

1. I know i posted a pic of an orange nib, but it was dry... so switched it with a blue one

montana spraypaint sells cans a little smaller than an axe can for less than 5 bucks
just to save you guys some trouble and money

I looked at their website a couple of months ago and can't really make heads or tails of it... It's too art based of a website, which isn't bad, but if you're trying to find Paint it's a bit difficult... Any tips?

I had trouble with the montana website as well
there is a website (pinkartltd.com) that sells all of the different kinds of montana cans. They have great customer service. I would highly recommend them. Also, search for them on youtube, they have lots of videos testing their products :)

littlechef37 says:
If you used copper pipe and stored the fuel somewhere else you could make a FLAMETHROWER

ooda55 says:
haha nice idea
those smaller canisters will have to be a LOT smaller
you can get tiny cans of spray paint from my local hardware store for about 3 quid but its still a good way of improvising

you could try it with those blo-pens but there real messy

Obsessive says:
Thats awesome.
I've got to make it.

akaeon182 says:
you could leave the red hose thing on but cut it down a bit so that way you make sure that you don't accidentally cover the hole with sticky tac or anything else if you used something more permanent and unrepairable.

darth2o says:
So, what are the smaller dusters at Staples called?

Mar 24, 2008. 5:05 PM [REPLY](#)

bumpus says:
I'm not sure but i know for sure that i have seen smaller gas dusters there
